St. Louis, Mo.

General Information

Northwestern Terra Cotta Stock Designs are published with a view of assisting and co-operating with Architects, Contractors and Owners in the use of Northwestern Terra Cotta in those structures where limited finances or the urgent need for quick deliveries will not permit the use of architects' special designs.

Every owner is interested in having a clean, attractive, up-to-date building—one on which the expense of up-keep is very low but which commands a high rental value and a high re-sale value. He is also interested in having a building that can be restored economically to its original cleanness. Northwestern Terra Cotta is unsurpassed for this purpose. It is being used in larger quantities every year for the trimmings or facing of stores, theatres, banks, office buildings, apartments, schools, churches, public buildings, garages, factories, etc. It is adaptable to practically all classes of buildings and gives character and individuality to the structures in which it is used.

Terra Cotta is not a new material, as many suppose. Some of the earliest records of mankind were in burnt clay and it was made extensively for building purposes in Italy and other European countries as far back as the fifteenth century. Northwestern Terra Cotta has been a standard building product for more than fifty years and thousands of buildings in Chicago and other large cities throughout the United States and Canada stand to-day as evidence of its superior qualities.

Northwestern Terra Cotta is a "Burnt Clay" product. It is made from specially mixed and highly refined clays; pressed by hand into plaster moulds by skilled workmen; retouched and hand finished upon removal from the moulds; dryed in specially constructed dryers; given an application of the desired glaze or color by the use of pneumatic sprayers; burned (or more properly baked) to a very high temperature in large kilns; carefully assembled, fitted and numbered for proper location in the building; and placed in storage ready for shipment as required.

The enclosed Plates and Instructions for Ordering give all information necessary for placing order for Northwestern Stock Design Terra Cotta. For quotations on architect's special designs, send complete plans and specifications to our main office.

Instructions for Ordering

When ordering material from Northwestern Terra Cotta Stock Designs, please give the following information:

1. Give identifying number of each item wanted.
2. Give quantity of each required, i. e., number of pieces or number of lineal feet.
3. Give color number in which the work is to be made.
4. Write name and address plainly.
5. State amount of entire order in dollars.
6. Give name of party to whom shipment is to be consigned.
7. Give name of railroad station to which shipment is to be made.
8. Give name of bank through which you want sight draft drawn if payment is to be made in this way.
9. Give any other information that you think will assist us in filling your order promptly.

How Shipments are Made

When an order is for less than a carload, terra cotta will be carefully packed in crates, and when order is sufficiently large to make a carload, terra cotta will be packed loose in cars in hay or excelsior to avoid breakage.

Terms of Payment

Thirty days' credit will be extended to customers from whom we have satisfactory credit rating. When a customer is unknown to us, shipments will be made sight draft, bill of lading attached. We will be glad, however, to have prospective customers send us the usual commercial references so that our Credit Department will be properly informed when an order is received.

Setting Drawings

When shipment of terra cotta is made, we will furnish with same, if necessary, a complete set of setting drawings which show the location of each piece in the building and any careful mason will have no difficulty in erecting the work.

Time Required for Shipment

We usually require about four weeks from receipt of order for shipment of terra cotta ordered from Stock Designs. However, if time will permit, it is better to allow somewhat longer than this so that our factory will have ample time to manufacture and assemble the material to insure its reaching you in first-class shape.

If you desire further information regarding the adaptation of Northwestern Terra Cotta Stock Designs to your needs, we will be glad to have you write us fully regarding the matter so that we may co-operate with you in the proper use of same.
